## eGFR

The term "eGFR = 0.0 ml/min/1.73m<sup>2</sup>" is an abbreviation for estimated Glomerular Filtration Rate. It is a measure of how well the kidneys are filtering waste products from the blood. A normal eGFR is greater than 60 ml/min/1.73m<sup>2</sup>, and a value of 0.0 ml/min/1.73m<sup>2</sup> indicates that the kidneys are not functioning properly.
